Economics, Accounting,
Management, Finance

PROJECTS

WaitList
For hosting and seating at restaurants. Stores guests on a waitlist, tables in dining area, and all instances of seating tables with number of guests and their respective turnover times. Provides calculated data back to the user to improve efficiency when seating guests in queue and managing busy services.

A Food Diary
Tracks recorded data over time in order to trace correlations between food eaten and allergic reactions. Full-stack, single-page application built with Rails for an API, Bootstrap with CSS for styling, and JavaScript for making AJAX requests.

Tic-Tac-Toad
Classic Tic-Tac-Toe with a slimy twist. SPA that uses JS for game logic and AJAX requests to send user information and game data to a provided API using JSON.

NFL Coach Simulator
Text input based game lets the user make play calls from a coach's perspective. Play outcomes are probability based, with logic designed using JavaScript. Tracks possession "down the field" and scores of both user and simulated opponent.

Dongle
A single-page-app to create pages and blog posts. Back-end built on ExpressJS and MongoDB. Front-end uses Handlebars to display dynamic data.

Digital Art Portfolio
Displays a personal portfolio of photography and mixed-media.
